

E-680 SERIES UNIVERSAL DATA LOGGERS / SCANNERS

DESCRIPTION

E-680 Series universal data loggers/scanners are advanced new generation micro-controller based industrial instruments. Dimensions are 96 x192 mm, conforming to IEC/TR 60668. The universal inputs and outputs of the device can be easily programmed by the user.

E-680 Series indicate measurements from 32 different points on the instruments display and determines alarm conditions. It can be directed to the common alarm relays and/or to the independent relays. It can also be connected to a PC via RS485 communication line and data can be collected and stored.

MAIN FEATURES

- High reading sensitivity with 16 bit resolution
- Infinite life time and high isolation voltage semiconductor multiplexer relay
- Standard RS485 MODBUS communication interface
- 2 common alarm relay outputs
- Optional current output
- Each channel can be programmed independently
- 2 set points for each channel with adjustable dead band
- Directing alarm states to a common or independent relay
- Programmable display and scan intervals
- Possibility of connecting up to 31 instruments to a PC by the same communication line
- Distributed system structure
